## LEVENHUK NELSON 8X30 SJÓNAUKI

Vrn. LEV72108

Modern Levenhuk Nelson 8x30 Marine Binoculars will be a perfect choice for fans of fishing, sea trips and water sports. This powerful optical tool with 8x magnification will allow observing distant objects in detail. A wide field of view provides for comfortable observing of the sea line.

A special feature of these long-range marine binoculars is a built-in compass and a rangefinder. The compass indicates the direction towards the object. Division value is 1°. North is 360°, South is 180°, East is 90° and West is 270°. The compass is equipped with diode light that is powered by two LR44 batteries.

You need to know either the size (height) of the observed object or the distance to it in order to work with the rangefinder. You can calculate an unknown parameter based on the rangefinder's indications, using a special formula.

The optical scheme of this model is based on Porro prisms. The optical elements are made of quality BaK-4 glass. Fully multi-coated lenses create a bright, sharp and detailed image.

The embossed shell is made of durable plastic. The rubberized
