LEVENHUK KARMA BASE 10X32 SJÓNAUKI

Vrn. LEV74165

Levenhuk Karma BASE 10x32 Binoculars is great for anyone who lives an active lifestyle. This lightweight optical instrument is convenient to hold and is perfect for observations. Binoculars are useful for studying wild animals' and birds' habits, observing natural and urban landscapes, following sports events at the stadium.

The optics provide 10x magnification and, at the same time, a field of view remains wide. The lenses and prisms are made of multi-coated BK-7 glass, which is why a delivered image is sharp, clear, and contrast. These binoculars do not gather much light; it is recommended to conduct observations in sunlight. The design uses eyepieces with twist-up eyecups; there is a diopter adjustment. Due to that, observers with imperfect eyesight can adjust the optics to their needs in an optimum manner. Sharpness is adjusted with the help of a central focusing wheel. A plastic shell is lightweight and shockproof.

The binoculars are adaptable to a tripod as well.

Features:

Tourist binoculars feature roof prisms made of coated BK-7 glass 10x magnification with a wide field of view
